

## Shepton Mallet and Croscombe: Survey Update

**Mendip District Council (MDC)** has secured funding from the Somerset Rivers Authority (SRA) to carry out a programme for enhanced Flood Risk Management across the district. This focused on non-main rivers and culverted watercourses. As part of this process, Croscombe and Shepton Mallet were identified as High Priority areas. Following the flooding event of October 2020, MDC secured further funding from the SRA to undertake a detailed investigation to fully understand the mechanisms of flooding across these two catchment areas and identify key opportunities for mitigation and improved resilience to flooding. Part of this investigation includes

undertaking surveys to fill any gaps in our existing knowledge of the surface water system.

Contractors, **Dando Surveying Ltd** and **Dando Utilities Ltd** were appointed to carry out this survey work, which was substantially completed in March 2022. The surveys will help us understand the existing systems better and inform solutions to mitigate flood risk.

### Further CCTV surveys will be undertaken in Shepton Mallet on 13 and 14 September 2022.

Some areas will require traffic management and temporary parking restrictions during these works. These will provide a safer environment for everyone.

The contractor will need access to manholes and culvert entrances. The majority of these are in the highway, however, access to outside spaces on private property may be required on occasion. Where this applies, we will contact specific occupiers/owners directly to ensure that we have permission prior to the survey.

To ensure that the operations run smoothly and are completed as quickly as possible:

**please help us by avoiding parking near access points (manholes & highway drains) and in the roads being surveyed once the work begins.**

This will ensure the vehicles can gain access and equipment can be safely set up. For details of the areas requiring traffic management measures, please refer to the plans provided.

We apologise for any inconvenience which might be caused during the surveys and thank you in advance for your understanding and cooperation.

## Shepton Mallet

### Traffic Management

**1** 13 Sept St Peter's Road

### No Parking

**A** 13 Sept Leg Square

**B** 14 Sept Forum Lane

**1** Traffic management

**X** No parking

## Croscombe

Further works are also being planned in Croscombe. This will include CCTV surveys on **Long Street** on **14 September**. No traffic management or parking restrictions are required to undertake these works.

It is also planned to undertake clearance works along a culvert near Jack's Lane Bridge. The date for this work is to be determined.
